Dr. Daryl Turner

Join us at the GPCE in Sydney in May and learn how you can now accurately diagnose sub-clinical Hypothyroidism to improve your patient's health and well-being.

As a trained Healthcare professional, you have probably realized that many cases of sub-clinical Hypothyroid can go un-diagnosed due to the inherent difficulty in testing and diagnosis.

TARI is proud to present World expert Dr. Konrad Kail & Dr. Daryl Turner who are leading the way in accurate diagnosis and treatment of Hypothyroidism and related diseases. This is a rare opportunity to learn the most up to date information and research on how to effectively and quickly diagnose and treat Sub-Clinical Hypothyroidism as well as treatment for Cortisol & Iodine deficiency problems.

These world renowned Doctors will be at the Sydney GPCE in May to reveal the research behind the new cutting-edge non-invasive diagnostic technology tools used in the research to screen patients at risk for Sub-Clinical Hypothyroidism and iodine sufficiency with very accurate results in 4 minutes or less. These devices reduce the need for TSH serum testing and outsourcing. This presentation should not be missed!
